Orchestrating a Multi-Agent Architecture with Copilot Studio

📅 03 March 2026

🕒 2:30 PM – 5:30 PM

📍 Online & In-Person (Reggio Emilia, Italy)

Vittoria Marano
Jr. Software Engineer

Contoso Electronics wants to create a **domain-specialized HR digital assistant** for its employees that will allow them to:

1. Access company documentation
2. Retrieve structured employee information related to HR topics
3. Search for up-to-date information exclusively from company-authorized web sources

Meet Contoso P&C Hub

An intelligent employee-facing AI agent, orchestrating specialized agents across internal documents, employee data, and trusted HR web sources

Agenda

Challenge

Multi-Agent Architecture

Orchestration

Live Demo

Key Takeaways

The background is a light blue gradient. On the right side, there are several curved, overlapping bands of a darker blue color. These bands are decorated with numerous small, glowing white dots, creating a sense of depth and movement, similar to a stylized representation of a DNA helix or a futuristic architectural structure.

Challenge

Why a single Agent is not enough

- Knowledge is fragmented
- Different data types (internal documents, tables, external websites)
- One assistant cannot specialize in everything
- Need for scalable AI Architecture

Multi-Agent Architecture

The background of the slide is a light blue gradient. On the right side, there are several curved, overlapping bands of a darker blue color. These bands are decorated with numerous small, glowing white dots, creating a sense of motion and data flow. The overall aesthetic is modern and technological.

From chatbot to AI Ecosystem

- Specialized agents per domain
- Orchestration layer
- Unified user experience
- Extensible design

Architecture Overview

- Parent Agent (Orchestrator)
- Documents Agent
- Data Agent
- Custom web search Agent

What each Agent does

Employee Assistant

Data Source:
SharePoint PDFs

Purpose: Policy & textual knowledge

Employee Data Assistant

Data Source:
Dataverse

Purpose: Structured employee data

HR Compass

Data Source:
Selected websites

Purpose: Bing Custom web search

Orchestration

How the Parent Agent works

- Receives user question
- Identifies data domain
- Routes to correct Agent
- Returns contextual answer

The background is a light blue gradient. On the right side, there are several curved, overlapping bands of a darker blue color. These bands are decorated with numerous small, glowing white dots, creating a sense of motion and digital connectivity. The overall aesthetic is modern and technological.

Live Demo

Multi-Agent in action

1. Document-based question
2. Structured data question
3. Web-based question
4. Cross-reference example

1. «Which are the advantages of Northwind Health Plus plan?»
2. «Show me the employees enrolled in this [Northwind Health Plus] plan»
3. «What are the top 10 HR policies every organization should implement?»
4. «Combine health plan info, PerksPlus enrollment, and training documents for Milan office employees»

Key Takeaways

Why this matters

**Domain
specialization**

**Improved
accuracy**

**Scalable
architecture**

Thank you
